

Allowable Cutoff From Device Length	
Standard 36"	Standard 48"
3.50"	15.50"

OPERATING INSTRUCTIONS

1550-MDJ MOTOR DRIVE ELECTRIC LATCH RETRACTION

FOR USE WITH JACKSON 20 SERIES EXIT DEVICES

PROVIDES SIMULTANEOUS ELECTRIC LATCH RETRACTION AND DOGGING (TOUCH BAR DEPRESSED)

Electrical Input Requirements:

Filtered and Regulated Power Supply

Voltage: 24VDC \pm 10%

Current: 1A MAX Inrush, 400mA MAX Holding

Non-polarized Leads

2-Conductor Wire Run	
Distance	Wire Gauge
70'	22
110'	20
180'	18
280'	16
450'	14
720'	12

- ① Remove Base End Cap
- ② Slide out Base Cover
- ③ Remove Push-Pad End Cap
- ④ Slide out Push-Pad Cover

Motor Drive Electric Latch Retraction Adjustment:

1. Verify the device is properly adjusted for mechanical operation. Electric operation should not exceed the mechanical operation or there will be a high risk of damage to the device. **We suggest setting the latch retraction under electric operation at 1/16" less than the latch retraction under mechanical operation.**
2. Locate the adjustment screw in the rear of the motor assembly. Rotate the adjustment screw clockwise to increase the latch retraction or counterclockwise to decrease the latch retraction.

Onboard Indicator Light Assignments:

Maintain input power to the exit device and check the onboard indicator lights.

Remove input power before attempting a solution.

Green (Power)	Yellow (Sensor)	Red (Error)	Indication	Possible Solution
Off	Off	Off	No Power.	Connect the wiring between the power supply and the exit device.
On	On	Off	Normal Operation. The touch bar is retracted to the dogged position and dogged; the latch is retracted by default. The device is allowed 2 attempts.	
On	Off	On	Error in operation. The touch bar did not retract to the dogged position within 2 attempts.	Rotate the adjustment screw counterclockwise to decrease the latch retraction.
On	On	Blink	Error in operation. The touch bar is retracted to the dogged position but not able to remain dogged. The device is allowed 5 attempts.	Rotate the adjustment screw counterclockwise to decrease the latch retraction.
On	On	On	Error in operation. Without power being removed, the touch bar went from being dogged to unintentionally being extended, and then the touch bar did not retract to the dogged position within 2 attempts.	Cycle the input power.
On	Blink	On	Error in operation. The touch bar did not extend from the dogged position when the power was last removed. The device will not attempt a retraction.	Clear the jam condition manually and cycle the input power.
